

40% of employee Internet access is non-work related.

How do YOU monitor, control and police it?

Control your Internet users' browsing habits and monitor downloads in real-time

Research by IDC shows that up to 40% of employee Internet access is non-work related. While shutting off Internet access is impractical, Internet monitoring and access control software enables network administrators to reduce unproductive Internet use. GFI WebMonitor™ helps you boost employee productivity by giving you the ability to monitor and control Internet access in real-time, ensuring that employee web browsing activity is aligned with business needs, and that any files downloaded are free of viruses and other malware.

GFI WebMonitor features WebGrade™, a site categorization database that gives you control over what sites users can browse and block access to websites in particular categories, such as adult material, online gaming, personal email, travel websites, P2P, social networks such as Facebook and MySpace, and more. This extensive database provides URL coverage for over 260,000,000 domains and is updated daily.

BENEFITS

- » Increase productivity by controlling your employees' web browsing habits
- » Formulate and enforce an effective Internet Usage Policy
- » Maximize bandwidth through time/bandwidth quotas and proxy caching
- » Protect the network from dangerous downloads in real-time with multiple antivirus engines
- » Prevent data leakage through socially-engineered websites
- » Scan HTTPS-encrypted traffic for additional security
- » Help mitigate legal liability.

Quality web filter
Comprehensive web security
Highly competitive pricing
Thousands of customers

GFI WebMonitor™

Web security, monitoring and Internet access control

Monitor, control and secure Internet usage on your network

With GFI WebMonitor you can:

- » Monitor your Internet users' browsing habits and downloads through granular interactive drill-down reports
- » Control Internet usage, boosting employee productivity by limiting or blocking access to non-work related sites
- » Secure your infrastructure by ensuring that downloads are free of viruses, spyware and other malware.

GFI WebMonitor is available in three editions

- » **WebFilter Edition:**
Includes browsing control based on time and bandwidth quotas, as well as website categorization and URL filtering
- » **WebSecurity Edition:**
Includes download control, virus scanning through multiple antivirus engines, anti-phishing and MSN/Live Messenger control
- » **UnifiedProtection Edition:**
Combines both the WebFilter and WebSecurity editions

Features available with all editions

- » Controlled access to the Configuration and Monitoring Interface
- » Monitor or block a connection in real time
- » Monitor or block applications' hidden downloads
- » Whitelist and blacklist
- » Policy exceptions
- » HTTPS scanning
- » Proxy caching
- » Anonymization of personal data
- » Support for virtual environments.

WebFilter Edition

Web filtering policies with categorization coverage of over 260m URLs

With GFI WebMonitor you can define web filtering policies, allowing or restricting access to particular categories of websites on a per user or per IP basis. Website categorization makes use of the WebGrade database, which offers extensive URL coverage across multiple languages and includes over 260 million domains. Due to the constantly changing nature of the web, GFI WebMonitor also queries GFI servers for categorization of URLs that are not found in the local cached database. If a URL is found to be uncategorized, it is processed and added to the database.

Browsing policies based on time and bandwidth quotas

You can also define web browsing policies which are based on time and bandwidth quotas, again on a per user or per IP basis. For example, you can allow a user to browse news category sites for only one hour per day or to download a maximum of 100MB per week. Such policies can be defined for specific websites or entire categories of websites.

Enforcing of SafeSearch

With GFI WebMonitor it is possible to mandate SafeSearch on search engines. This option is typically customizable at the user level, i.e., the user can disable it, however, when enabling this feature, the personal option will be overridden and the one mandated by GFI WebMonitor will be used instead.

WebSecurity Edition

User/group/IP-based download control policies based on real file types

You can create multiple user/group/IP-based download control policies in order to reflect security policies in the organization. For example, the administrator can create a policy such that no employee can download executables, ZIP archives, videos and MP3 files.

Protect your network from viruses, spyware, phishing and other malware

Downloaded files can be scanned with multiple antivirus engines. The Norman and BitDefender antivirus engines are bundled with the WebSecurity Edition, and the Kaspersky antivirus engine is also available as optional.

Phishing site protection

All websites that users try to access can be checked against an auto-updatable database of phishing URLs. If a website is found on the phishing URL list, it will be blocked and the user shown an appropriate message.

MSN control

Monitor and block Live Messenger (MSN) incoming and outgoing messages as well as file transfers through IM control policies.

UnifiedProtection Edition

The UnifiedProtection edition combines both WebFilter and WebSecurity editions.

GFI WebMonitor is also available as **GFI WebMonitor for ISA/TMG** – a dedicated plug-in for Microsoft ISA/TMG Server.

GFI WebMonitor dashboard

Granular monitoring of Internet access

System requirements

- » Windows Server 2003/2008, Windows XP/Vista/7
- » Internet Explorer 7 or later
- » .NET Framework 2.0 or later

System requirements – ISA/TMG Server plug-in

- » ISA Server 2004/2006/Forefront TMG
- » Internet Explorer 7 or later
- » .NET Framework 2.0 or later
